APPLICANT: Xu, Jian Guo

TITLE OF INVENTION: A New and Distinctive DNA Sequence of E.

TITLE OF INVENTION: A New and Distinctive DNA Sequence of E.

Patent No. 5756293

TITLE OF INVENTION: Coli O157:H7 and its Use for the Rapid, Sensitive and
TITLE OF INVENTION: E. coli
TITLE OF INVENTION: E. coli
NUMBER OF SEQUENCES: 29

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Sequence 2, Application US/08258188

Sequence 2, Application US/08258188

Patent No. 5475098

GENERAL INFORMATION:
APPLICANT: XU, Jian Guo
TITLE OF INVENTION:
APPLICANT: XU, Jian Guo
TITLE OF INVENTION: A NEW AND DISTINCTIVE DNA SEQUENCE OF E.
TITLE OF INVENTION: SPECIFIC DEFECTION OF O157:H7 AND OTHER ENTEROHEMORRHAGIC
TITLE OF INVENTION: E. coli
NUMBER OF SEQUENCES: 29
CORRESPENDENCE ADDRESS:
ADDRESSEE: Townsend and Townsend Khourie and Crew
STREET: Steuart Street Tower, One Market Plaza
CITY: San Francisco
STATE: California
                                                                                                                                                                                                                                                                                                                                   24803, A

Patent No. 6019384

GENERAL INFORMATION

APPLICANT: Macinnes, Janet

APPLICANT: Maliard, Bonnie

APPLICANT: Maliard, Bonnie

APPLICANT: Rosendal, Soren

TITLE OF INVENTION: NOVEL BACTERIAL PREPARATIONS, METHOD FOR

TITLE OF INVENTION: PRODUCING SAME, AND THEIR USE AS VACCINES

CORRESPONDENCE ADDRESS:

ADDRESSEE: Bereskin & Parr

STREET: 40 King Street West
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Query Match 1.5%; Score 14; DB 5; Length 758; Best Local Similarity 100.0%; Pred. Patent No. 6022960
GENERAL INFORMATION:
APPLICANT: POTTER, ANDREW A.
APPLICANT: MANNS, JOHN G.
TITLE OF INVENTION: GRH-LEUKOTOXIN CHIMERAS
NUMBER OF SEQUENCES: 34
CORRESPONDENCE ADDRESS:
ADDRESSEE: REED & ROBINS LLP
STREET: 285 HAMILTON AVENUE, SUITE 200
CITY: PALO ALTO
CITY: PALO ALTO
STATE: CA
COUNTRY: USA
ZIP: 94301
COMPUTER READABLE FORM:
MEDIUM TYPE: FORPY disk
COMPUTER: IBM PC compatible
COMPUTER: IBM PC compatible

Patent No. 5723129

GENERAL INFORMATION:
APPLICANT: POTTER, ANDREW A.
APPLICANT: HUGHES, HUW P.A.
TITLE OF INVENTION: GRH-LEUKOTOXIN CHIMERAS
NUMBER OF SEQUENCES: 28
CORRESPONDENCE ADDRESS:
ADDRESSE: REED & ROBINS
STREET: 635 BRYANT STREET
                                                                              CLASSIFICATION DATA:

APPLICATION DATA:

APPLICATION NUMBER: US 07/960,932

FILING DATE: 14-0CT-1992

ATTORNEY/AGENT INFORMATION:

NAME: ROBINS, ROBERTA L.

REGISTRATION NUMBER: 33,208

REFERENCE/DOCKET NUMBER: 9001-0016.10

TELECOMMUNICATION INFORMATION:

TELEPHONE: (415) 327-3331

INFORMATION FOR SEQ ID NO: 2:

SEQUENCE CHARACTERISTICS:

LENGTH: 926 amino acide

TYPE: amino acide

TYPE: amino acide

TOPOLOGY: linear

Patent No. 5708155

GENERAL INCRAMINATION

APPLICANT: POTTER, ANDREW A.

APPLICANT: HUGHES, HUW P.A.

ITLE OF INVENTION: CHIMERAS

NUMBER OF SEQUENCES: 15

COURRESPONDENCE ADDRESS:

ADDRESSEE: REED & ROBINS

STREET: 285 HAWILTON AVENUE, SUITE 200

CITY: PALO ALTO

STATE: CALIFORNIA

COUNTY: PALO ALTO

STATE: CALIFORNIA

COUNTY: PALO ALTO

STATE: CALIFORNIA

COMPUTER READABLE FORM:

MEDIUM TYPE: Ploppy disk

COMPUTER: PADO ALTO

SOFTWARE: Patentin Release #1.0, Version #1.25

COMPUTER: 19401

COMPUTER: 139 ANDRESS: APPLICATION DATA:

APPLICATION NUMBER: US/08/455,970A

FILING DATE: 14-0C1-1992

CLASSIFICATION NAMBER: US 07/960,932

FILING DATE: 14-0C1-1992

ATTORNEY/AGENT INFORMATION:

NAME: ROBINS, ROBERTA 10.

RESTERENCE/DOCKET NUMBER: 901-0016.10

TELECOMMUNICATION NUMBER: 901-0016.10

TELECOMMUNICATION NUMBER: 9120A

Publication No. US20030035809A1
GENERAL INFORMATION:
APPLICANT: GEORGE, LISLE W
APPLICANT: ANGELOS, JOHN A
APPLICANT: HESS, JOHN F
TITLE OF INVENTION: MORAZELLA BOVIS CYTOTOXIN, CYTOTOXIN GENE, ANTIBODIES
TITLE OF INVENTION: AND VACCINES FOR PREVENTION AND TREATMENT OF MORAXELLA
TITLE OF INVENTION: BOVIS INFECTIONS
FILE REPREMENCE: 481.06
CURRENT APPLICATION NUMBER: US/09/884,696
CURRENT FILING DATE: 2001-06-19
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         KVAAGFELSNQVIGNVTKAISSYVLAQRVAAGLSTTGAVAALITSSIMLAISPLAFMNAA 300

- encodes fusion protein Interleukin 2-leuko-toxin gene fusion useful as vaccine for animal pneumonia

20; Fig 3; 68pp; English Claim

The IL-2-LKT protein was encoded by a chimeric gene contg. the bovine IL-2 gene fused to the DNA encoding at least one epitope of leukotoxin from P. haemolyvica. IL-2-LKT was gel purified and ligated into the expression vector pGH433 lac1. The resulting clone pAA356 (ATCC 68386) contd. the desired gene fusion under the control of the B. coli lac promoter. The protein produced by the gene fusion is useful in a vaccine compan. with a pharmaceutically acceptable vehicle, e.g. a carrier homologous to a rotavirus VP6 inner capsid protein. The vaccine can be used for preventing or ameliorating respiratory diseases in animals e.g. shipping fever pneumonia

```
immunogenic chimeric protein that comprises gamma-interferon (gamma-IFN) or an active fragment thereof, linked to an epitope of a Pasteurella haemolytica leukotoxin (kTr). Pasteurella species, especially pasteurella haemolytica, are responsible for respiratory diseases in a range of agricultural animals, most particularly cattle, but also sheep, pigs, horses and fowl. Shipping fever is the most economically important respiratory disease associated with Pasteurella species, affecting 15-30% of exposed cattle and resulting in a 2-5% mortality rate in the exposed population. The vaccine composition of the invention is is useful for preventing or ameliorating respiratory diseases such as pneumonia, particularly shipping fever pneumonia, in livestock. The present sequence represents a fusion protein comprising bovine interleukin-2 (IL-2) and pasteurella haemolytica leukotoxin, which may
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   125

     The present invention relates to antigens of Moraxella, in
AB
     particular, Moraxella bovis, nucleic acid sequences
     encoding these antigens and formulations for use in raising an
      immune response against Moraxella.

A candidate for a vaccine against infectious bovine AB

keratoconjunctivitis (IBK) has been cloned and characterized from Moraxella bovis. The plb gene encodes a protein of 616 amino acids (mol. mass of .apprx.65.8 kDa) that expresses

phospholipase B activity. Amino acid sequence anal. revealed that

PLB is a new member of the GDSL (Gly-Asp-Ser-Leu) family of

lipolytic enzymes.

A concentrated bacterial culture supernatant from the hemolytic Moraxella AB bovis strain UQV 148NF was used to immunize mice and

generate monoclonal antibodies (MAbs). One, MAb G3/D7, neutralized

the hemolytic activity of M. bovis and recognized a 94-kDa

protein by Western blot anal. in hemolytic M. bovis strains representing each of the different fimbrial serogroups.

Exposure of corneal epithelial cells to M. bovis concentrated culture supernatants demonstrated a role for an exotoxin in the pathogenesis of infectious bovine keratoconjunctivitis, while neutralization of hemolytic and cytotoxic activities by MAb G3/D7 implies that these activities are related or have common epitopes.

The action of M. bovis hemolysin was further characterized

in sheep erythrocyte prepns. with a binding step and Ca2+ required

for lysis to proceed, similar to the RTX family of bacterial exotoxins. Neutralization of lytic activity in vitro is evidence

for the presence of M. bovis antigens, which may be

capable of protecting cattle from the development of infectious

The presence of fimbriae on Pasteurella multocida has been reported,

but there have been no prior studies aimed at conclusively characterizing these structures. We now report on the

identification and characterization of type 4 fimbriae on serogroup

A, B, and D strains of P. multocida. Under microaerophilic conditions P. multocida showed an increased expression of the

fimbriae, which were observed to form bundles. Fimbriae purified by high-performance reverse-phase liquid chromatog. constituted a single 18-kDa subunit, the first 21 amino acids of which shared very high similarity with the N-terminal amino acids sequence of other type 4

> Shears 571-272-2528 Searcher :

fimbrial subunits. Antiserum against the P. multocida 18-kDa protein immunostained the type 4 fimbrial subunit of Moraxella **bovis** and Dichelobacter nodosus. Based on these observations we conclude that P. multocida possesses type 4 fimbriae and have designated the P. multocida fimbrial subunit Ptf/A.

AB Reactivity to the mycobacterial 65 kDa heat shock protein (HSP 65) has been implicated in the pathogenesis of adjuvant arthritis in the rat, and may be involved in the pathogenesis of rheumatoid arthritis

Searcher: Shears 571-272-2528

or other autoimmune diseases in humans. Accordingly this study sought quantitative or qualitative differences in the antibody reactivity to HSP 65 between normal controls, patients with the multisystem autoimmune diseases, rheumatoid arthritis (RA) and systemic lupus erythematosus (SLE) and patients with the mycobacterial infections, tuberculosis (TB) and leprosy. Levels of antibodies to recombinant HSP 65 in serum were measured by ELISA in normal subjects and in patients with RA, SLE, TB or leprosy. Antibody reactivity was examined by Western blotting using polypeptide fragments of HSP 65 derived by recombinant DNA techniques, or by digestion with trypsin or cyanogen bromide (CNBr). Reactivity to a synthetic peptide, the adjuvant arthritis T-cell epitope of HSP 65 (180-188), was tested by ELISA. High levels of antibodies to full length recombinant HSP 65 from Mycobacterium bovis were present in all the groups tested. By Western blot analysis, most reactivity with intact HSP 65 was retained in a 32 kDa tryptic fragment, judged by sequencing and size estimations to represent amino acid residues 118- approximately 388. sequence included a major T-cell epitope for adjuvant arthritis (180-188), but these nine amino acids were not essential for B-cell reactivity since most sera also reacted with residues 188-540 which lack the T-cell epitope. Moreover, the 180-188 synthetic peptide was unreactive by ELISA, and did not inhibit reactivity with the intact recombinant HSP 65. In conclusion, most individuals had antibodies to mycobacterial HSP 65, presumably resulting from previous bacterial infections. The magnitude of the response was unrelated to the occurrence of systemic autoimmune disease, and the pattern of antibody reactivity with recombinant and proteolytic fragments of HSP 65 suggests that the major B-cell epitope is conformational and consists of discontinuous regions of the molecule.

Calves were vaccinated with cloned Moraxella bovis pili of AB serogroup C (experiment 1) or B (experiment 2) either as a monovalent formulation or as part of a multivalent preparation with

> Searcher : Shears 571-272-2528

pili of six other serogroups. Within 4 weeks of the second vaccine dose vaccinated calves and non-vaccinated controls were challenged via the ocular route with either virulent M. bovis strain Dal2d (serogroup C) or M. bovis strain 3WO7 (serogroup B) in experiments 1 and 2, respectively. Calves vaccinated with multivalent vaccines had significantly lower antibody titres than those vaccinated with monovalent preparations. Nevertheless, the levels of protection against infectious bovine keratoconjunctivitis (IBK) achieved with multivalent vaccines were 72% and 83% for the groups challenged with M. bovis strains of serogroups B and C, respectively. The serogroup C monovalent vaccine gave 100% protection against experimentally induced IBK and M. bovis isolates cultured from the eyes 6 days post-challenge were identified as belonging solely to serogroup C. Unexpectedly, only 25% protection was achieved against homologous strain challenge of calves that received the monovalent serogroup B vaccine. Furthermore, the majority of M. bovis isolates recovered from calves in this group belonged to serogroup C, as did half of those isolates cultured from the multivalent vaccinates. remaining bacterial isolates from the latter group, together with all isolates from the non-vaccinated controls, belonged to serogroup Results are consistent with the hypothesis that derivatives of the serogroup B challenge inoculum had expressed serogroup C pilus antigen within 6 days of the challenge, possibly as a result of pilus gene inversion occurring in response to the presence of specific antibody in eye tissues and tears.

LANGUAGE:

Numerous field isolates of Moraxella bovis have previously AΒ been classified by serol. techniques into seven serogroups, each defined by homologous cross-reaction with antisera prepared against purified pili of a single prototype strain. The gene encoding pilin from each of the prototype strains has been characterized by nucleotide sequence determination The coding sequences show extensive homol. (70 to 80%) while the strains were also characterized. The presence of an addnl., partial pilin gene in each prototype strain was confirmed by Southern blot anal., and the partial pilin genes from two strains of one serogroup were characterized by sequence determination Features of the pilin gene sequences are considered in relation to pilin gene inversion and the serol. variants which may arise from inversion events.

Protection conferred by a cell-free preparation from a haemolytic AB Moraxella bovis isolate, UQV 148NF, was compared to an equivalent fraction from a non-haemolytic M. bovis isolate, Gordon 26L3, and to a recombinant DNA-derived pili vaccine. Three groups of ten calves were vaccinated twice with one of the three prepns. and, together with ten non-vaccinated calves, challenged with virulent M. bovis isolate Dal 2d. Compared to the control group, significant protection was observed in the group receiving the pili vaccine and the group receiving the preparation from haemolytic isolate, UQV 148NF.

Pili (fimbriae) were prepared from Moraxella bovis strain AB Dalton 2d (Dal2d) and from a derivative of Pseudomonas aeruginosa K/2PfS that contained a plasmid-borne Dal2d pilin gene and produced pili having serogroup-specific identity to Dal2d. Nine calves were vaccinated with two doses each of 30 micrograms authentic M. bovis Dal2d pili in oil adjuvant and 10 calves were vaccinated with a similar dose of P. aeruginosa-derived Dal2d pili in the same formulation. All 19 calves and 10 non-vaccinated controls were challenged by instillation of 1  $\times$  10(9) virulent M. bovis Dal2d cells into both conjunctival sacs 19 days after the second vaccine dose. The serological response to vaccination and the degree of protection against experimentally induced

> 571-272-2528 Searcher : Shears

infectious bovine keratoconjunctivitis (IBK) were assessed. None of the nine calves vaccinated with authentic M. bovis Dal2d pili developed IBK while two of those vaccinated with P. aeruginosa-derived Dal2d pili developed lesions which accounted for a mean group lesion score of 0.3. In contrast, 9 of the 10 non-vaccinated calves developed IBK lesions, the majority of which were progressive, required early treatment and accounted for a mean group lesion score of 1.5. These results demonstrate the potential of a relatively low dose of pili produced by recombinant DNA technology for development of an effective vaccine against IBK.

Three groups of ten calves were each immunised with a total of 400 AB micrograms pili prepared from three separate strains of Moraxella bovis in Alhydrogel-oil adjuvant as two divided, equal doses

> 571-272-2528 Searcher : Shears

21 days apart. Groups 1 and 2 each received a monovalent vaccine made from strain 4L and S276R respectively, which belonged to pili serogroup A. Group 3 received vaccine made from pili of strain Maffl, belonging to serogroup F. A further group of ten calves served as non-vaccinated controls. Calves in groups 1 and 2 had developed serogroup A-specific antibody and those in group 3 developed serogroup F-specific antibody, and some evidence of cross-reacting antibody was also detected when measured by an agglutination test using formalin-killed piliated cells of serogroup A strain 4L. Although antibody titres measured against purified pili by ELISA were highest with homologous serogroup antigens, cross-reactive titres to shared epitopes of M. bovis pili were also detected by this method. Ocular challenge of the 40 calves with virulent M. bovis of serogroup A strain S276R was carried out 14 days after the second vaccine dose. All non-vaccinated calves developed infectious bovine keratoconjunctivitis (IBK). The percentage protection in groups 1 (strain 4L) and 2 (strain S276R) was 60% and 80% respectively (P less than 0.05), with mean lesion scores of 0.7 and 0.3 out of a possible 6.0. The percentage protection of calves in group 3 (strain Maff1) was only 30%, with a mean lesion score of 1.4 compared with 2.2 for non-vaccinated controls. The present findings, together with other evidence indicating that immunity to IBK is serogroup-specific, suggest that inclusion of pili from one representative strain from each of the seven Australian and British serogroups in a polyvalent, subunit vaccine should effectively protect the majority of cattle against IBK caused by most field strains of M. bovis encountered in Australia and the United Kingdom.
